**Meeting your
investigation needs today,
and in the future**

SmartCase offers the best of two worlds: a suite of off the shelf case management modules, developed by a company with a long-standing reputation of providing solutions to organisations globally, and the ability to customise them quickly and easily to get an exact fit. Your ways of working can be quickly and easily implemented using the underlying 'no code' technology built into SmartCase, avoiding the need for IT development projects historically required to adapt software to fit your needs. You can even add your own branding to make sure it feels like an extension of your own systems.

SmartCase

For Policing

SmartCase works for you:

Configurable

Information fields and process steps can be quickly and easily configured to suit your ways of working using 'no code' technology. Smart forms adapt based on user-selected answers.

Scalable

Manage one incident through to a complex global investigation.

Secure

Comprehensive role and user-based permissions and logic to protect your data.

User friendly

Customise menus to specific teams or users. Create pre-defined reports and live dashboards.

Easy to search

Find information quickly by creating saved search options and searching text inside attached documents.

Access anywhere

Access via any device from desktop to smartphone or via our Apple or Android app.

Interoperable

API integration with other applications and external databases or data sources.

Always up-to-date

If you choose to access SmartCase through a web browser you will always get the most up-to-date version and capabilities.

Your end-to-end process will be more efficient at every step:

All your information in one place	Police process workflows	Record activity – making it fully auditable	Link analysis	Case file preparation
Log or import new and existing information.	Trigger workflows and process updates at defined times or steps.	Manage and record investigation team activity. Record outcomes.	Create one or more cases linked to an investigation. Identify trends and links.	Create reports. Manage disclosure. Automate court bundle creation.
No more switching between systems	Tailored to policing processes	Demonstrate Compliance	Unlock insights	Avoid duplication

The technical basics:

- Microsoft Azure cloud hosting or on-premise deployment options (requires webserver capable for .Net application, such as IIS).
- Database agnostic – can sit on MySQL, Oracle, DB2, Informix etc.
- Open technology connectivity and system methods – ODBC, OLE/DB, ADO type connectivity.
