

DATA DISCOVERY POWERED BY DIVEBELL

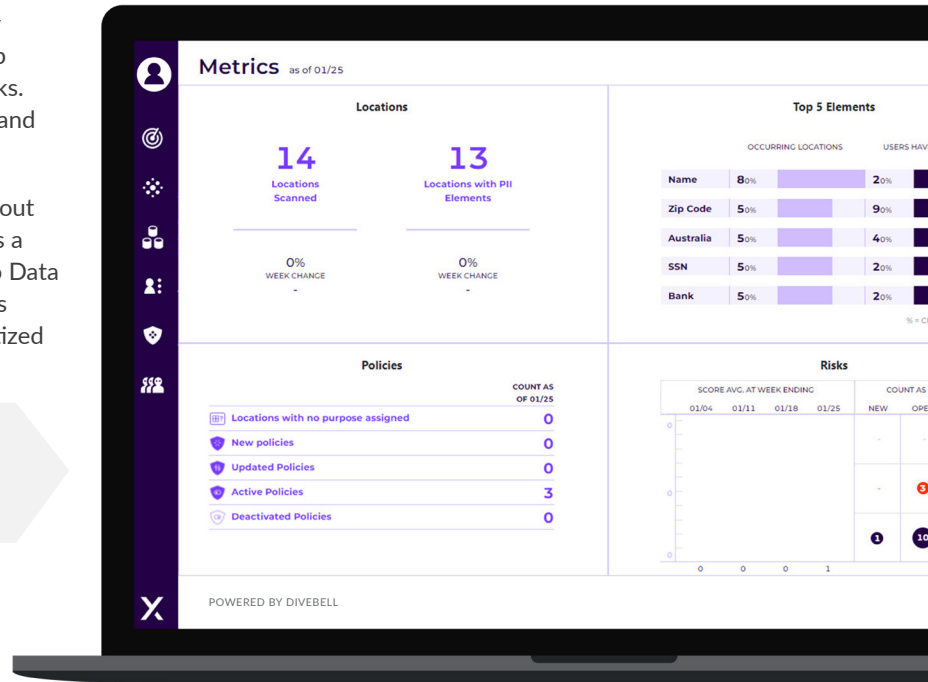

The fastest way to find, identify and classify personal information, determine data policy compliance, and calculate risk across your data landscape.

Eliminate labor-intensive work and simplify your privacy compliance. With **Exterro Data Discovery**, you get an up-to-the-minute, accurate, and actionable view of data risks. Find personal and sensitive data automatically, identify and compare data risks, and enforce data policy compliance.

Exterro Data Discovery shows you what is important about your data in intuitive, interactive dashboards. It provides a clear view of your compliance and security risks. Exterro Data Discovery helps mitigate risks and demonstrate progress toward regulatory and policy compliance through prioritized and actionable displays.

Take control of your data risk with Exterro.

Selected Features

Exterro Data Discovery reveals the privacy and security risks in your data automatically. See the big picture and drill down to specifics quickly, so you can mitigate risks and manage security. The automatic data map pinpoints where personal and sensitive data exists, who has access to it, and which data sets contain policy violations. Deep visibility into data makes remediation and risk reduction simple.

PII Detection

The system is pre-trained to find personal identifiable information for global privacy regulations. Provide additional training for the AI yourself for even better and faster results.

Assessments/Change Monitoring

The system tracks all changes to the data, its structure, and its permissions. With the facts at your fingertips, there is no need for manual assessments when evaluating changes to privacy or security risk.

Data Policy Enforcement

Detect data in violation of data policies. Set policies up easily, and add new policies or change existing ones at any time. During each scan, Exterro checks data for policy conformance and flags non-compliant data.

Security

Exterro Data Discovery continues our commitment to information security. Data is never moved from its location or stored in the cloud. All analysis takes place in the data's native environment.

Access Visibility

Get a clear window into changes in information security authorizations. In addition to PII, Exterro Data Discovery monitors who has access to the data and reports any changes in that access.

Speed

Exterro Data Discovery uses statistical techniques to sample the data, resulting in scan speeds orders of magnitude faster than other data discovery technologies.
