

DATA SUBJECT ACCESS REQUEST®

Easily manage and orchestrate the entire data subject access request process

Effectively responding to Data Subject Access Requests (DSARs) as required by regulations such as GDPR or CPRA can be challenging due to ever-growing amounts and sources of data and the sheer volume of requests. Exterro's DSAR software solution is helping organizations of all sizes significantly reduce the amount of time and money spent fulfilling these requests. Exterro's solution enables clients to orchestrate the entire process from request to validation, search, redaction, and delivery--or any other desired outcome.

Robust workflows orchestrate the entire process, from intake through delivery.

Selected Exterro Data Subject Access Request Features

Dynamic Request Portal with Automated Identity Verification

Consumers, employees, prospective employees or contractors can easily submit requests using the portal. Customizable workflows and strong security provide secure two-way communication with any data subject. Multiple identity verification methods are supported out of the box. The portal automatically displays request status information, eliminating unnecessary support interactions.

Configurable, Automated Workflows

Exterro's DSAR solution includes easily configurable workflows that automate all the tasks and activities associated with the entire DSAR process. Once a request is made via the Portal, appropriate personnel are notified of required actions, such as validating, searching, collecting, reviewing, redacting and fulfilling requested information. Dashboards provide visibility into the status of every action, looming or missed deadlines, data collection progress and much more.

Comprehensive Information Search, Collection, Review and Redaction

Automatically search, collect, review, and redact information. Workflows manage the process and can execute these tasks either manually or automatically. Review and produce responses quickly using Exterro's industry-leading review system. Advanced analytics provide visibility and cost estimates.

Robust Reporting

Comprehensive reporting capabilities empower users to better manage, measure and optimize DSAR responses and report on the number, type and nature of requests, as may be required by regulations.
