INTRODUCING

ANALYSE AI+

We've dialled up Detego Analyse's award-winning AI analytics and workflow automation with the launch of Detego Analyse AI+

DETEGO GLOBAL

Detego Analyse AI+ builds on industry-leading features that investigators have come to love and trust – including our advanced AI-powered object detection capabilities, multi-language OCR (Optical Character Recognition) and the offline translation of documents in over 230 languages to English.

Analyse AI+ unlocks a host of new tools, including AI-powered semantic search, similar image identification, lightning-fast AI audio and video transcription, and the quick translation of audio and video evidence.

Rely on Analyse AI+ to provide you with all the essential tools you need to eliminate bottlenecks and close cases faster.

- Save time and effort by leveraging its AI-powered semantic search to locate critical data in seconds. Eliminate manual data sifting that would usually take hours and focus on building stronger cases.

- Don't be limited by keywords; search for specific concepts and contexts within your image and video evidence. Rapidly identify broader concepts like "men in masks with automatic weapons in London at night", "drug deals in a black sports car belonging to a specific brand", "screenshots of customer account details", "distressed children", "uniformed teams holding flags with terror-related symbology" and more.

- Tap into powerful similar image search capabilities by uploading reference images or simply use the "show similar" feature on existing images. Quickly match anything from specific locations, signs, movements and objects through to patterns or designs on wallpaper, graffiti or clothes.

- Save valuable time by automating the conversion of audio to text. Use the new AI transcription feature to accurately transcribe and index words from audio and video files such as voice notes, video messages, social posts and voicemails in minutes. Achieve transcription speeds that are well over 1,000 WPM.

- Eliminate the need to manually review hours of audio and video recordings. Identify data that's related to investigations by using advanced text and keyword matching capabilities on the data indexed from audio and video files.
- Make findings in real-time by utilising live AI-generated English subtitles for content from over 50 non-English languages as you examine audio and video files in the evidence viewer.

- Go beyond offline document translation and unlock the power of live AI translation for audio and video content. You can now translate videos and audio in 50 non-English languages to English, facilitating efficient international and cross-border investigations.

That's not all! You can also:

- Discover hidden files with improved compound file steganography
- Easily share filters across exhibits
- Enjoy new and improved tag management capabilities
- Unlock enhanced video frame processing capabilities
- Get to data faster with the updated Exhibit Contents View
- Enjoy better support for GrayKey acquisitions
- Import .msabdetego files using the MSAB importer

And much more!

You can now enjoy all of these AI-powered features - worth 1,000s of dollars - absolutely free with the purchase of any of our acclaimed digital forensics tools. These include:

BALLISTIC IMAGER

GLOBALLY PATENTED TECHNOLOGY

Selected as a **FINALIST** for the coveted SC award for the **Best Computer Forensic Solution** in 2022

The go-to solution for rapid data acquisition

Used in the field and in labs, Ballistic Imager can forensically secure 1 TB in less than 8 minutes, offering speeds that are 4x faster than the average.

- Experience blisteringly fast data capture from computers, laptops and servers
- Leverage patented technology that bypasses hardware limitations to extract data through multiple collectors, simultaneously
- Extract data in live or boot modes without removing hard drives
- Stop extractions before completion without losing data
- Present captured data as an E01 or DD image
- Enjoy greater mobility thanks to its portable and compact design
- Get non-technical users fully operational with a 30-minute training

FIELD TRIAGE

GLOBALLY PATENTED TECHNOLOGY

WINNER of the 2022 Security and Policing Innovation Award in Digital Forensics

Quick digital forensic analysis, anywhere

A highly portable field-based solution that's perfect for investigating data on PCs, laptops, servers and loose media. Field Triage swiftly identifies and alerts users about data related to investigations without running time-consuming data extraction and analytical processes.

- Get instant visual alerts of suspicious items through the patented red-amber-green visual alert system to enable snap decision-making
- Easily customise and deploy across a range of investigations covering fraud, human trafficking, terrorism, indecent images of children, financial crime, insider threats and more
- Scan a target device and acquire all usernames and passwords used in less than 30 seconds
- Empower non-technical users with an easy-to-use interface

MEDIA ACQUISITION

Selected as a **FINALIST** for the coveted SC award for the **Best Computer Forensic Solution** in 2023

Rapid, automated data acquisition

A smart tool that automates digital data capture from removable media, computers and hard drives (HDDs and SSDs).

Media Acquisition comes with a simple, intuitive interface, allowing users to quickly analyse multiple devices in minutes.

- Concurrently secure and analyse data from multiple removable devices
- Acquire data from hard drives removed from damaged systems
- Get live views of logical data as it is streamed into the platform and receive automated alerts on suspicious items through Detego's patented red-amber-green visual alerts
- Access powerful carving tools to recover deleted data

DETEGO MD powered by GMDSOFT

Seamless data acquisition from mobiles, smart devices and apps

Detego MD combines GMDSOFT's leading data extraction and decryption capability with Detego Analyse AI+'s robust analytics, automation and reporting to provide access to 1,000s of devices and apps.

- Gather forensically sound data from tens of thousands of phone models and more than 2,000 apps
- Extract data from IoT devices, smart TVs, sat navs, drones and more
- Easily unlock and access critical data from Android devices
- Enjoy iOS support including backup file decryption and keychain extraction
- Carry out physical and logical extractions on Android, iOS, Windows OS, Tizen OS and other mobile OSs
