Discovery overview

Discovery is an intuitive application that helps investigators build more structured cases and close them faster. Data can be collected from multiple sources—online, offline and from 3rd party services—and documented in a secure and traceable manner.

Smart features help investigators visualize data and quickly spot the clues needed to drive the case forward. A professional report is generated automatically while the case is being built—so, once all the pieces are in place, all that's left to do is click a button.

Cross-reference data from other sources

Connect with the external services you usually use or want to use. Discovery acts as an integrator, providing access to all services within the same workspace so you can easily collect and cross-reference data.

Maintain a structured Investigation

Gather data from multiple sources—online, offline and from 3rd party services— in a single workspace. Using Discovery's modern and visual case architecture makes it easy to document your evidence in a secure and traceable manner while maintaining the chain of custody.

Discover clues

Smart features help you and your team quickly visualize data and spot the clues needed to drive the case forward. Your collected data is automatically stored in data categories for easy overview.

Professional reports at the click of a button

A well-designed report is automatically generated while the case is being built, making it easy to keep stakeholders in the loop about case updates and progress. Easily export cases as PDF or html files at any time during the investigation. Just press a button.

Lock down evidence

Keeping data integrity intact is critical for upholding the chain of custody. Discovery tracks everything—ensuring the full case history is preserved. Confidently build cases that hold up in court.

Featured user benefits

All tools in one place

With access to a complete set of aggregated tools and services, you can find and cross-reference any type of data.

Integrated browser

Swiftly alternate between the clear web and darknet—without losing access to essential Discovery functions.

Always sharable results

With an automatically generated report, it's easy to keep other parties in the loop about case updates.

Hidden data made visible

Stop clicking through to find out whether images have any hidden data. Exif data is displayed automatically.

Visualized connections

Map out the big picture. Instantly review connections between collected data and identified targets in a clear visual format.

03 —

Featured organizational benefits

Super fast onboarding

Discovery is designed so that everyone, regardless of skill level, can easily get started. Our online training is included for all Discovery users.

Deliverables that make sense

Streamline the investigation process by having everyone on your team use the same structure and application.

Get a consistent report layout that both senders and recipients can understand.

Keep the ball rolling

Thanks to the secure .pali file format, departments and team members can efficiently pass cases back and forth and simply pick up where the last one left off.

Track who did what

Never lose sight of who collected what data—even when another team member takes over the case. Discovery's audit trail keeps track of everything.

The paliscope platform

The Paliscope platform is used globally by investigators and analysts in the law enforcement, military, and private sectors. It includes Discovery and YOSE, an AI-driven search engine for locally stored data. They can be used individually or together to form the ultimate investigative team.

Easy to get started

Paliscope's software is easy to install and maintain; you don't need to be an IT expert to get started.

Safe data storage

Paliscope software is installed and runs on your organization's computer – all data is stored locally.

Analytics for all skill levels

Investigators of all skill levels can use our solutions without the need for time-consuming training.

Solves time-consuming tasks

With the Paliscope platform, you can solve various time-consuming tasks and use your time efficiently.
