

IDA Teams

Built for high-security and distributed environments, IDA Teams brings version control, collaboration, and secure project sharing to IDA Pro. All while preserving traceability and avoiding conflicts.

Easy collaborations for your reverse engineering workflows

Featuring →

Project-Based Collaboration: Share IDA projects with full version history

Secure by Design: Suitable for air-gapped or classified environments

Change Tracking: Resolve conflicts and review changes across sessions

Flexible Deployment: Operate standalone or on internal infrastructure

Benefits →

Eliminate duplication by synchronizing team efforts

Track and audit changes across team members

Enable peer review and long-term project continuity

Boost productivity in security-conscious environments

Tech Specs →

- + Server-client architecture
- + Compatible with IDA Pro and Hex-Rays Decompiler
- + Minimal setup; deployable in secure, air-gapped setups

Who's it for →

- + Incident response teams
- + Government and defense contractors
- + Research groups with collaborative projects
- + Private-sector security teams handling critical software

Integrations →

- + IDA Pro + Hex-Rays Decompiler required
- + Works with Lumina for improved recognition across team
