

MSAB Kiosk

The next-generation MSAB Kiosk offers the proven power of XRY mobile forensic software in an easy-to-use, locked-down workstation. It is designed for frontline operational users for whom mobile data recovery and analysis is just one part of their responsibilities, enabling them to perform extractions quickly and with minimal training.

Using the touchscreen or a keyboard and mouse, users can follow step-by-step extraction workflows, fully customizable to your organization's unique needs.

The MSAB Kiosk has played a crucial role in helping organizations worldwide expand and decentralize their mobile forensic operations, enhancing efficiency and eliminating delays and backlogs. With the MSAB Kiosk, non-specialist users can process devices, freeing up lab experts to focus on the most complex cases. This helps increase the number of extracted devices and reduces the backlog for volume crimes.

- Rapid data extraction and reporting
- Secure .XRY file format
- 64 GB RAM
- Minimal training

Customized Workflows for Compliance and Integrity

The customizable workflow on the MSAB Kiosk enables your organization to tailor individual user workflows for different user types and skill levels. Step-by-step guides and workflows can be configured to align with your organization's standard operating procedures and regulations. They can instruct and even restrict user groups to specific instructions and extraction actions, ensuring that every user follows approved, consistent processes. This in turn safeguards evidence integrity and compliance.

Rapid Data Extraction and Forensic Reporting

The Kiosk enables users to perform rapid, controlled extractions at the first available opportunity and conduct data analysis, to establish the content of a device as quickly as possible. All user-created or extraction-related data captured during the workflow can be used to automatically generate customizable forensic reports. The workflow uses the same extraction engine as XRY Office and XRY Pro.

Centralized control and efficient data management

By managing MSAB Kiosks with XEC Director, administrators can ensure full centralized control to efficiently manage users, workflows, client systems, software and its licenses; generate operational and management reports, and remotely assist users - all from a single location. All Kiosk user activities are logged and uploaded to XEC Director where it can be viewed and used as a basis for reporting.

Cost-effective training and certification

Minimal training is required to perform extractions and analysis with the MSAB Kiosk. To help your organization maximize return on investment, we offer customized training options, and online training options to certify users.

Features

- Dedicated turnkey terminal solution
- Unique help file for every device
- Easy touch screen data extraction
- Immediate reporting
- User control and administration

Tools

- SIM card reader & clone SIM cards
- Integrated write protected memory card reader
- XRY cable kit for all supported devices

Included

- 12-month warranty on XRY Logical and XRY Physical
- 3-year warranty (provided license is maintained for that period)
- Standard MSAB Kiosk workflow package
- Network enabled for file sharing and storage
- MSAB tech support and software updates for 12 months

Specifications

- Weight: 10,6 kg (23.4 lbs.)
- Size: H 46 cm (18.1") x W 54 cm (21.26")
- IPS touch screen: 23.8" HD widescreen
- Data Storage, M.2 NVMe SSD: 1 TB (OS) + 4 TB (extractions)
- 64 GB RAM
- Dual front side USB-A + USB-C ports

- Contact sales@msab.com to get started

Ensure ISO standards compliance

Through its locked-down configuration and automatic audit logging, the MSAB Kiosk helps your organization comply with the requirements of ISO 17025 and ISO/IEC 27037
