

StegoHunt™ Suite

With this full suite of technologies, investigators, incident responders, breach and data leak prevention teams, and auditors are able to quickly identify if steganography is present in active cases or work environment.

Suite includes: **StegoHunt™**, **StegoAnalyst™**, **StegoBreak™**

STEGOHUNT KEY FEATURES:

- Quickly identify if steganography is present in your investigations by scanning for over 1,000 data hiding applications using Fibonacci search methods.
- Identify suspect carrier files that otherwise go undetected, including program artifacts, program signatures, and statistical anomalies.
- Utilize multiple operational discovery modes, including directory, drive, archives, drive image, and network path.
- Generate case specific reports for management or court presentations.

STEGOANALYST KEY FEATURES:

- Provide deep analysis for detected images and audio files.
- Utilize the file viewing panel to display individual file attributes, including image details, DCT coefficients, and color pairs. This allows for a complete analysis of identified carriers.
- Select from various filter options for further analysis, such as Least Significant Bit (LSB's) of specific colors.

STGOBREAK KEY FEATURES:

- Crack and extract payloads from many carrier files using a simple point and click interface.
- Leverage the popular password dictionaries included in order to execute a dictionary attack.
- Easily bring in other dictionaries as well as create your own to expand your dictionary attacks.

DATA SHEET

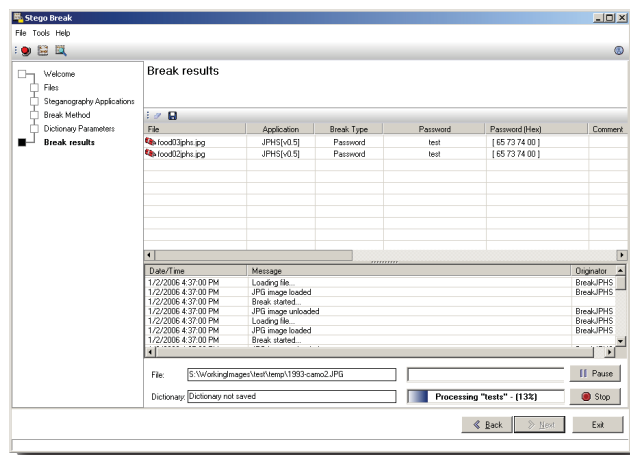

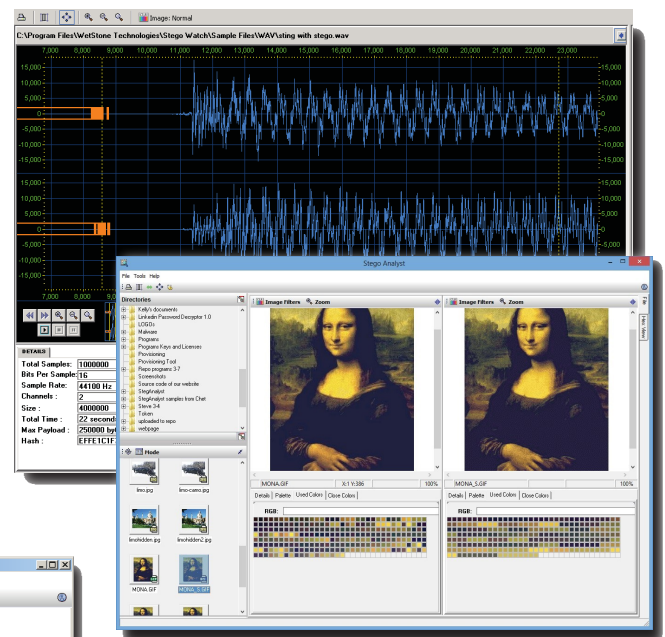

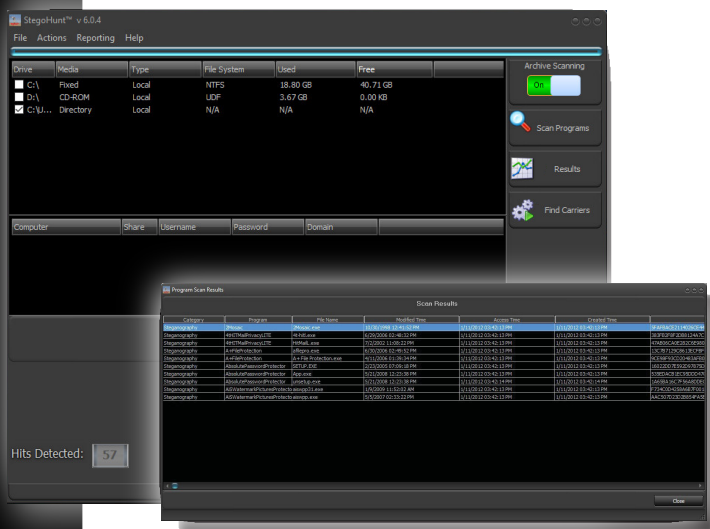

WHAT'S INCLUDED?

- Electronic software download
- Access to monthly Dataset updates
- Customer support portal account
- 1-Year maintenance
