### Asset Manager

The asset manager allows for the input of serial numbers, expiration dates, renewal costs, custody and many other details related to computers, dongles, kits, or agency tagged items.

Keep track of where your grant money goes by assigning assets to a grant.

### Analytics

Administrators of xBit, tasked with overseeing their teams of examiners and investigators, are provided a suite of features.

They can allocate resources, track case progress, create reports for upper management and grant purposes, and manage their tool usage and expirations.

### Flexible Hosting Options

xBit offers both cloud hosting options and a resource-light virtualized server environment through Docker to meet any agency or company requirements. While the cloud option provides the speed, security and scalability of Amazon Web services (AWS), Docker securely containerizes data and ensures a stable platform.
